

Amidata Cyber Security and Vulnerability Assessment

ESTABLISH YOUR CYBER SECURITY BASELINE

Effective cyber security has never been more important.

The threat of cybercrime to Australian organisations is ever increasing:

- ✔ **Cyber-attacks are more sophisticated.**
 The number of attack tools are growing, and attack methodologies are evolving.
- ✔ **The frequency of cyber-attacks is increasing.**
 13% up on last year.
- ✔ **The attack surface of modern IT systems is broader.**
 Mobile devices, Work from Home, Internet of Things and hybrid multi-cloud trends mean more potential entry points.
- ✔ **The financial costs and impacts are rising.**
 This year's average financial cost of \$64,000 per attack is 14% up on last year, and this excludes other losses due to brand demise, customer litigation, compliance fines and revenue drops.

Are you adequately protected?

Your next best step is to assess the security of your IT systems to establish your baseline, and then take action to remedy gaps in your cyber security posture.

Amidata's portfolio of cyber security assessment services provide customers with a step-by-step approach. Customers may choose one of the adjacent packages, or any combination of services.

Each service stands alone and provides a key step towards implementing effective cyber security measures.

Amidata Cyber Security Assessment Portfolio

Services	Bronze	Silver	Gold

Amidata Cyber Security and Vulnerability Assessment

Your next best step is to understand your starting point. Amidata's Cyber Security and Vulnerability Assessment is our foundation assessment service. An evaluation of your cyber security solutions is conducted, and a thorough vulnerability scan of your IT assets is undertaken. Vulnerabilities are identified and guidance is provided.

Our team guides you through the following steps:

Kick-off meeting

A project manager is assigned and coordinates a meeting with our cyber security expert and stakeholders from your organisation. IT personnel are interviewed and requirements identified to ensure an efficient assessment is conducted and to clarify project objectives.

Security Assessment

In collaboration with your IT team, the following steps are undertaken by our cyber security expert:

Evaluation of current security solutions.

Current cyber security solutions in place across your organisation are evaluated against industry best practices.

Vulnerability scans.

A thorough vulnerability scan will examine your organisation's IT assets and identify security vulnerabilities and potential intrusion entry points.

Security tooling deployment and removal.

Amidata will deploy scanning tools within your IT environment to search for security vulnerabilities and will remove these tools once the scans are complete.

Written report

Our cyber security expert will prepare a report containing the following:

- ✓ Executive summary of key findings and recommendations.
- ✓ Detailed assessment of all findings with remediation recommendations.

Presentation

The service concludes with a presentation of the report to stakeholders outlining key findings and recommendations, along with a Q&A session.

Protect your data, protect your reputation.
